

The Menswear Order Process for Renting:

Prior to Wedding:

- The groom/bride schedules an appointment at Blush to establish a profile of the items they would like to place on their order.
 - The groom will most likely get fitted for his items at this appointment but if you would like to just pick out styles and get fitted on another date you are more than welcome to.
 - We recommend making this appointment, for just the groom/bride to get the profile developed and then if you have other members of your party needing to be measured for them to schedule a separate appointment to do their fittings.
 - If you have anyone ordering with us that is out of town, please download our 'Out of Town Menswear Form'
- When you have your appointment to get fitted, Blush asks for 50% of the total of the rental to be paid at that appointment and then the remainder is due when you pick it up, the week of the wedding. You are more than welcome to pay the total balance when you are fitted as well.

Week of the Wedding:

- The menswear orders usually arrive the Monday or Tuesday before the wedding. Sometimes the items can arrive on Wednesday, but you will be informed in advance on the arrival date.
- When the items arrive, we will give the groom/bride a call and let them know that the items have arrived and then they will call all of the members of their party to let them know that their items are here and ready to try on. Everyone will schedule an appointment to come in and try them on.
 - We ALWAYS recommend trying on the items before Wednesday. If you come in and try them on later than Wednesday, we will not have time to make any changes to your order. If an item does not fit, it is possible to overnight a new item, but it will be at the expense of the customer.

After the Wedding:

- The rental items are due back the Monday after the wedding. If the items are returned after Monday, there is a \$25 fee per day that they are late.
- If an item was damaged during your event, there is a damage replacement fee that will be discussed on return.
